Dear Hiring Team,

My strong technical foundation, experience working on diverse teams, background in leadership and communication, and passion for creative and elegant solutions make me an ideal candidate.

My previous experience as a teaching assistant for computer science and Americorps volunteer teaching ninth grade algebra in underserved community schools has given me the ability to collaborate and communicate effectively with diverse teams and people of all backgrounds, levels of education, and technical expertise. I am excited to integrate my broad skill set into developing effective, intuitive, and dynamic software. I recently built a full stack web application using Ruby on Rails, React.js, and Redux.js focusing on math educational content, and I built a front end only website, shelffaux, using only Javascript and html where I wrote an algorithm to sample images to create a custom interactive animation and display the images in dynamic perspective.

Thank you for your time and consideration,

Casey Fritsch
